## Portfolio

### Food App

Purpose of this app is to suggest our customer desire recipes according to their diet type and taste. So how does this app come to know about diet and taste of every customer? This is done when new customer register in this app, on registration app takes some inputs from user and it record it in user's profile and suggest recipes by filtering it from database according to their record.

### Smart Restaurant App

Application provides a complete control over the restaurant operations. The System is entirely designed for a well know leisure club of the Karachi. Because of their various serving locations and kitchens within a club premise, it is almost impossible for the staff to severe, mass diners in a committed time. App flow comprehensively integrates the operational excellence of a restaurant. Now, a waiter just needs to inserts the customer order and his/her dinning location, system will automatically place the order to a pre-defined kitchen.

### BSD Sales

Designed and developed for a client in Pakistan. This application is used by the customers of the organization to place order for any general order supply item, Since there is a huge market and new customers cannot reach them physically for product overview and pricing they can now simply use the app where client has database of around 6000+ products of various sizes, types and colors. He can simply check the price anytime or place a purchase order with specifying amount and receive the goods at his shipping address. Plus this app supports offline functionality so the customer can see the prices and prepare the order even if he has no internet connectivity.
